The laboratory grown diamond described in this Report (Report) has been graded, tested, conclyzed, examined and/or inscribed by International Gemological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-mode) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the color. IGLI employs and utilities those techniques and equipment runningly available to IGLI, including, without limitation, 10X magnification, connected triplet loupe, binocular microscope, master color companion stones, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGLI in the case where diamond melec is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color clarify and cardin weight.
